

SAI KRISHNA ADHUGIRI

Lincoln, NE | +1 (475) 267-8124 | saikrishna64a@gmail.com | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

- Senior Data Analyst with 4+ years of experience in data analysis, data reporting, and business intelligence, delivering analytics solutions in financial and enterprise environments using SQL, Python, Power BI, and Tableau.
- Experienced in data visualization and dashboard development, building Power BI and Tableau reports to track KPIs, business metrics, and operational performance, improving reporting efficiency and decision-making.
- Strong expertise in designing reporting datasets and dimensional data models in Snowflake, enabling scalable data reporting, consistent metric definitions, and improved query performance.
- Skilled in ad-hoc analysis, trend analysis, and business insights generation to identify operational inefficiencies and support data-driven decision making across finance, product, and operations teams.
- Proven ability to automate reporting workflows, improve data quality through validation techniques, and optimize SQL queries and dashboards to enhance reporting accuracy, performance, and overall business outcomes.

TECHNICAL SKILLS

Data Analytics & Business Intelligence: Data Analysis, Business Intelligence, KPI Design & Tracking, Ad-hoc Analysis, Trend Analysis, Root Cause Analysis, Data Storytelling

Visualization & Reporting: Power BI (DAX, Power Query), Tableau, Looker, Dashboard Development, Executive Reporting, Self-Service BI

Programming & Querying: Python (Pandas, NumPy), SQL (Advanced Queries, Joins, Window Functions, CTEs)

Modern Data Stack & Warehousing: Snowflake, Azure Synapse Analytics, Data Warehousing, Dimensional Modeling, Data Mart Design

Analytics Engineering & Data Transformation: dbt (Data Build Tool), ELT Pipelines, Data Transformation, Semantic Layer / Metrics Layer

Data Engineering & Processing: Azure Databricks, PySpark, Big Data & Distributed Data Processing

Cloud & Scalable Data Platforms: Microsoft Azure (Data Services), Scalable Data Pipelines

Product & Advanced Analytics: Product Analytics, User Behavior Analysis, Funnel Analysis, Cohort Analysis, A/B Testing, Statistical Analysis

Data Integration & APIs: REST APIs, Data Ingestion & Integration

Data Quality & Governance: Data Validation, Data Quality, Data Governance

Performance & Optimization: Query Optimization & Data Performance Tuning

Tools & Workflow: Advanced Excel, Git, JIRA, Agile/Scrum

PROFESSIONAL EXPERIENCE

Data Analytics - Virtual Job simulation

Apr 2026

Quantium | Remote

- Performed data analysis on large-scale retail transaction datasets using SQL and Advanced Excel, identifying purchasing trends, customer segments, and revenue drivers to support commercial reporting.
- Applied customer behavior analysis, trend analysis, and KPI evaluation to uncover sales patterns and product performance insights, enabling data-driven recommendations for category optimization.
- Conducted A/B testing and uplift analysis for benchmark store selection using statistical methods, measuring trial performance and validating business hypotheses for retail strategy decisions.
- Built data-driven reports and dashboards using Excel and data visualization techniques, translating analytical findings into actionable insights for Category Managers and business stakeholders.

Quantitative Data Analyst - Virtual job simulation

Apr 2026

JPMorgan Chase & Co. | Remote

- Analyzed financial datasets using Python (Pandas, NumPy) and SQL, performing statistical analysis to assess loan portfolio risk and support data-driven credit risk modeling.
- Developed probability of default (PD) models using quantitative techniques and data transformation methods, improving risk segmentation and enhancing financial risk assessment accuracy.
- Applied dynamic programming and data modeling techniques to transform FICO scores into risk categories, strengthening predictive analytics and portfolio segmentation logic.
- Evaluated pricing data and time-series financial datasets using Python-based analysis, generating insights for risk management, investment decisions, and financial performance evaluation.

Senior Data Analyst

Jul 2024 - Present

Fiserv | Lincoln, NE

- Led analysis of large-scale financial transaction data using SQL and Python to generate business insights on revenue trends and operational performance, improving reporting accuracy by 25%.
- Delivered executive-level Power BI dashboards using DAX and Power Query for data visualization, dashboard reporting, and stakeholder reporting of KPIs and business metrics, reducing manual reporting effort by 40% and accelerating decision-making.
- Designed dimensional data models and data mart structures in Snowflake to support scalable data reporting and dashboard development, improving query performance by 30% and enabling business metrics consistency and query optimization.
- Conducted deep-dive ad-hoc and trend analysis using SQL window functions and Python to identify anomalies in transaction data, applying statistical analysis to improve operational performance and decision accuracy.
- Defined KPI tracking frameworks and reporting logic in collaboration with product, finance, and operations teams, enabling data-driven decision making and improving performance visibility.
- Built unified reporting datasets using SQL to support operational reporting and performance reporting, improving reporting consistency and reducing report generation time from hours to minutes.
- Established data validation and data quality checks using SQL-based rules to support reporting automation and business metrics accuracy, ensuring 98% accuracy in reporting datasets.

- Optimized Power BI data models and SQL queries to improve dashboard reporting performance and stakeholder reporting responsiveness for business users.

Data Reporting Analyst

Jul 2020 - Dec 2022

DXC Technologies | Bangalore, India

- Analyzed enterprise operations data using SQL to support data reporting and generate business insights, improving data availability for reporting by 30%.
- Supported Tableau dashboard development for data visualization and dashboard reporting of KPIs and operational metrics, improving stakeholder reporting visibility into business performance.
- Prepared reporting datasets using Excel and SQL-based transformations to ensure data accuracy, increasing reporting accuracy by 25% across business reports.
- Performed ad-hoc analysis using SQL queries to identify trends and inefficiencies in operations workflows, supporting teams in improving turnaround time.
- Automated recurring reporting processes using Advanced Excel and SQL to support reporting automation, reducing manual workload by 35% and improving report delivery timelines.
- Worked with business stakeholders to gather reporting requirements and assist in building data reports aligned with operational needs.
- Evaluated user and transaction data using Excel-based analysis to support reporting and performance tracking, contributing to improved service metrics.
- Standardized reporting datasets using Excel and SQL transformations to support data integration and consistent reporting datasets, improving data consistency across business reports.

PROJECTS

Financial Analytics Dashboard & KPI Monitoring System

- Built a centralized reporting dataset in Snowflake using SQL to integrate finance and operations data, supporting data ingestion and data integration, improving KPI tracking accuracy by 25%.
- Developed Power BI dashboards with DAX-based calculations to monitor revenue trends and operational metrics, improving stakeholder visibility and reducing manual reporting effort by 30%.
- Streamlined reporting workflows by scheduling automated data refresh in Power BI, reducing report preparation time from hours to minutes and ensuring access to up-to-date insights.

Customer Behavior & Product Analytics Platform

- Analyzed user activity and transaction data using Python and SQL to create structured datasets for product analytics, applying cohort analysis and funnel analysis to improve visibility into engagement trends by 20%.
- Applied data analysis techniques to identify behavior patterns and feature usage trends, enabling product teams to improve user engagement and retention metrics.
- Designed reporting dashboards to present product metrics and user insights, reducing dependency on manual analysis and improving decision-making speed across stakeholders.

Reporting Automation & Data Transformation Framework

- Transformed raw business data using SQL and Azure Databricks into structured reporting datasets, leveraging big data processing and distributed data processing to improve data readiness by 30%.
- Optimized data transformation workflows in Databricks to improve processing efficiency across large datasets, reducing reporting latency by 30% and enabling faster report delivery.
- Automated recurring reporting using Power BI and SQL-based workflows, reducing manual effort by 35% and improving consistency in KPI tracking across business teams.

EDUCATION

Master of Science in Business Analytics

Jan 2023 - May 2024

University of New Haven | West Haven, CT

Bachelor of Technology in Electronics and Communication Engineering

Aug 2016 - Sep 2020

MLR Institute of Technology | Hyderabad, India
